DANGER

- DO NOT throw the light directly into human eyes. This may cause temporary blindness, or permanent damage to the eyes.
- DO NOT cover the flashlight's head or stand the flashlight on its head when it is on. The radiation energy may cause damage to the flashlight itself, or even result in the burning of flammable objects nearby.

WARNING

- DO NOT activate turbo mode repeatedly under high temperature to prevent the flashlight body from overheating and hurting the user's hand.
- Do not leave it on for too much while immersed in sea water or other conductive media. Please try to keep it clean and dry.
- DO NOT use non-protected rechargeable batteries.
- If the product is left unused or carried and transported, please lock the button to avoid accidentally activating the flashlight.

NOTICE

- When the flashlight is turned off, moonlight, low, medium, or high mode will be memorized and become the default mode when the light is turned on again (high mode will only be memorized for 10 minutes. After that, the memorized mode will revert to the medium setting).
- The turbo mode will slowly step down to high mode in 4 minutes in normal temperature.
- DO NOT short-circuit the ball switch cap with the body surrounding it. The short circuit in this case will result in an electric discharge of below 3mA between them, and may lead to a complete battery drain if it is in this state for too long.
